

Five Cybersecurity Tips for Every Type of Enterprise

Cybersecurity remains a top priority, whether a company has its own internal security team or relies on an outsourced Managed Security Services Provider (MSSP).

1

Balance **Security** and **Access** to protect the network, while still providing a good user experience.

3

Join **InfraGard**, a partnership between the FBI and public/private sectors, for information and education on emerging technologies and threats.

2

Train **ALL** of your employees.

78%

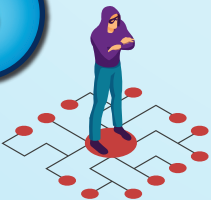

Forbes noted that of IT leaders say the C-Suite is top target

4

Scrutinize the **Point of Sale (POS)**. Every device/endpoint increases your breach risk - that includes smart devices, 3rd party APIs and mobile apps.

5

Stay vigilant! With the threat of deepfake AI people entering the workforce, consider requiring new remote workers to go in person to a facility for a background check.

Partnering with a Managed Security Services Provider (MSSP) ensures that your business is protected under any circumstances. Even with an in-house IT team, an MSSP can improve security and enable growth.
