

# You've Got Mail

*If Internet Was Delivered Like Your Packages*

## Fiber

Like express shipping, fiber is often the fastest option, but comes at a high price and isn't available everywhere.

## GEO Satellite

Like freight shipping, GEO is the real workhorse, capable of reaching nearly anywhere at an affordable price and with high capacity.

## Low Earth Orbit (LEO) Satellite

Like overnight shipping, LEO offers nearly real-time speed and the ability to access hard-to-reach areas.

## Private Network

Like a private shipping service, a private network provides dedicated service with no competition for capacity.

## Cellular Backhaul

Like a car carrier, cellular backhaul offers limited capacity and speed, but is necessary when infrastructure is lacking.
