

# Reaching More than 30,000,000 People with Internet Access around the World

## with 65,000+ Hughes Satellite-Enabled Community Wi-Fi Hotspots

For operators and governments working to bridge the digital divide, a satellite-enabled Community Wi-Fi solution from Hughes quickly and easily enables Internet service to hundreds of users at a time. Whether offering service under a Universal Service Obligation (USO) or through a shared subscription model, the Wi-Fi Hotspot, combined with High-Throughput Satellite backhaul, makes expanding Internet access affordable for governments and providers seeking to reach unserved and underserved communities.

### Mexico

- Offering government-subsidized free Wi-Fi at 27,500+ hotspots

### Indonesia

- Serving prepaid Wi-Fi at 15,000+ hotspots

### Russia

- Providing subscription Wi-Fi at 1,300+ hotspots

### Colombia

- Offering government-sponsored Wi-Fi at 10,000+ hotspots

### Brazil

- Offering government-subsidized free Wi-Fi at 7,500+ hotspots

And connecting people at thousands more hotspots across Latin America and around the world.

### CONNECTING THE UNCONNECTED

Some countries offer free Wi-Fi at schools for students and the local community, subsidized by the government.

Some countries offer government-sponsored free Wi-Fi at community centers, health clinics and libraries for local citizens to use.

In some places, merchants offer Wi-Fi to local villagers at a low per-use price, making internet access affordable while enhancing the local business.
