Don't Let Your Network Slow Down Your Decision Making!

Let Hughes® Managed Services enhance your network's performance so you can create a better user experience and deliver mission success.
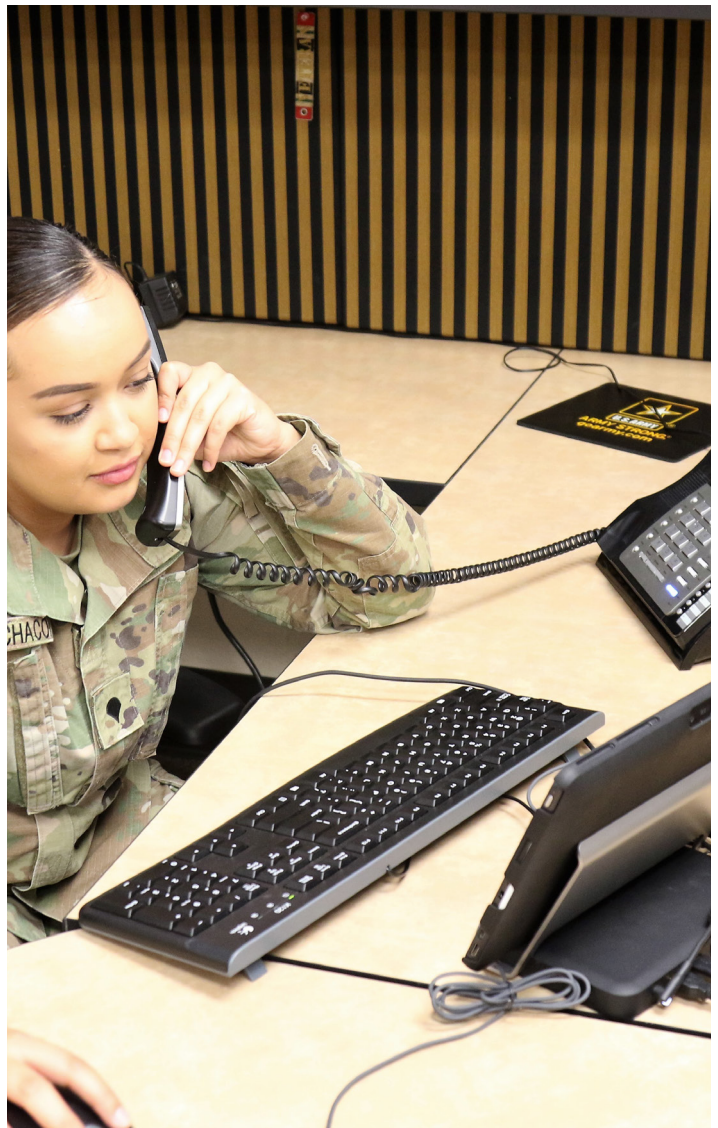

No matter how you approach your network and digital infrastructure, there are many day-to-day challenges. Perhaps you face the need to:
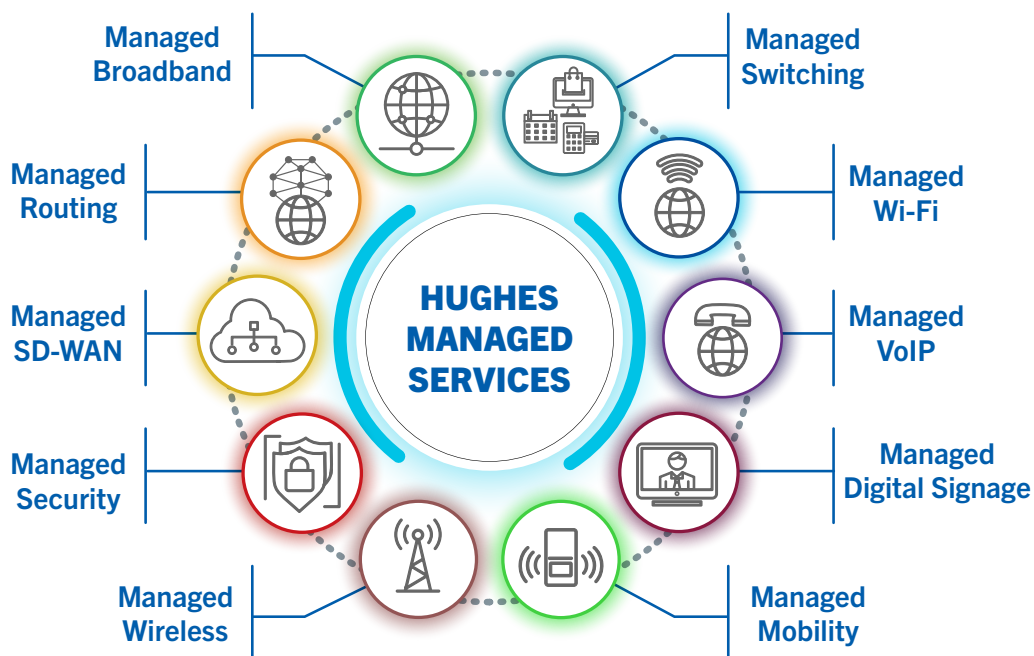

- Increase bandwidth as you add users and apps to the network
- Address changing requirements with the flexibility of multiple transport options
- Improve the customer experience with a secure, reliable, and high-speed network

Tackling these issues while staying on top of the latest software updates and security practices is no small matter.

Hughes Managed Services are designed to solve these very real tactical and operational challenges in an agile, scalable, and secure manner. Our solutions:

- Optimize critical data sharing.
- Improve situational awareness across the network.
- Make faster, better informed decisions.
- Position the DoD to maintain superiority in the contested global environment today and in the future.

Managed Broadband Connectivity

Bring Your Own Broadband (BYOB) or choose a fully managed network from Hughes. Both options include an MNSP switch to deliver fast and secure EMV transactions and access to system upgrades.

Managed Router Services

Hughes Managed Routing and Managed Router Services complement our Managed Broadband Connectivity by simplifying the management of routing equipment across all locations. The service provides for end-to-end high availability and secure site access across the entire wide-area network.

Managed SD-WAN

Hughes delivers options to ensure you have the network needed to effectively run your business in today's competitive market.

Managed Security Services

The PCI Compliance Suite is designed to help make the PCI compliance process easier so you can focus on your business without worrying about the status of your compliance.

Managed Wireless

The Hughes Wireless Internet Access (WIA) is a business class service that can provide wirelessly enabled routers and serve as primary or backup connectivity for a location. As a business class service, we can offer the bandwidth and reliability necessary to support your connectivity needs.

Managed Switching Services

Hughes simplifies the management of LAN/VLAN switches across all locations. The service complements our Managed Router Service by bringing all of the devices under the same management control and integrates the WAN and LAN/VLAN service to ensure consistent and seamless operations and management.

Managed Wi-Fi Services

Hughes Guest Wi-Fi solutions can help you to improve customer service, increase customer engagement, and gain more traction with point-of-purchase promotions.

Managed VoIP Services

Hughes offers high-quality voice communications that are more affordable, more flexible, and offer more features than a traditional phone line.

Managed Digital Signage Services

Turn your employees into brand ambassadors and your customers into loyal buyers with turnkey digital signage solutions from Hughes. We can install, host, maintain, and support your digital signage, as well as integrate the technology with your network.

Managed Mobility

More than just handsets and services plans. The Hughes Managed Mobility service provides you with data only solutions for IoT devices, connected transportation, remote and pop up locations. The service also includes mobile device management to help protect your company data. Get connected and do business wherever your customers need you.

Benefits of Hughes Managed Services:

■ Reduces your risk across the entire network.

■ Accelerates benefits through faster and standardized deployments.

■ Meets your changing needs through scalable solutions that can change as the mission changes.

■ Provides greater protection through an integrated approach to security.

■ Creates a solid foundation for your digital initiatives.

■ Improves tactical user and commander experience.

■ Improves operational efficiency.

■ Gives you more time to plan and execute the mission.

Hughes manages over **500,000** business and government sites worldwide and has deployed over **65,000** SD-WAN sites to date with seamless, multi-transport broadband solutions. Recognized by leading analyst firms as a leader in the space, Hughes is adding new wireless and mobility services to our portfolio.
